

Autonomous submarine exploration by a group of robots

L. Jaulin

Cité des congrès de Nantes, June 03, 2022
Capteurs communicants pour le génie océanique

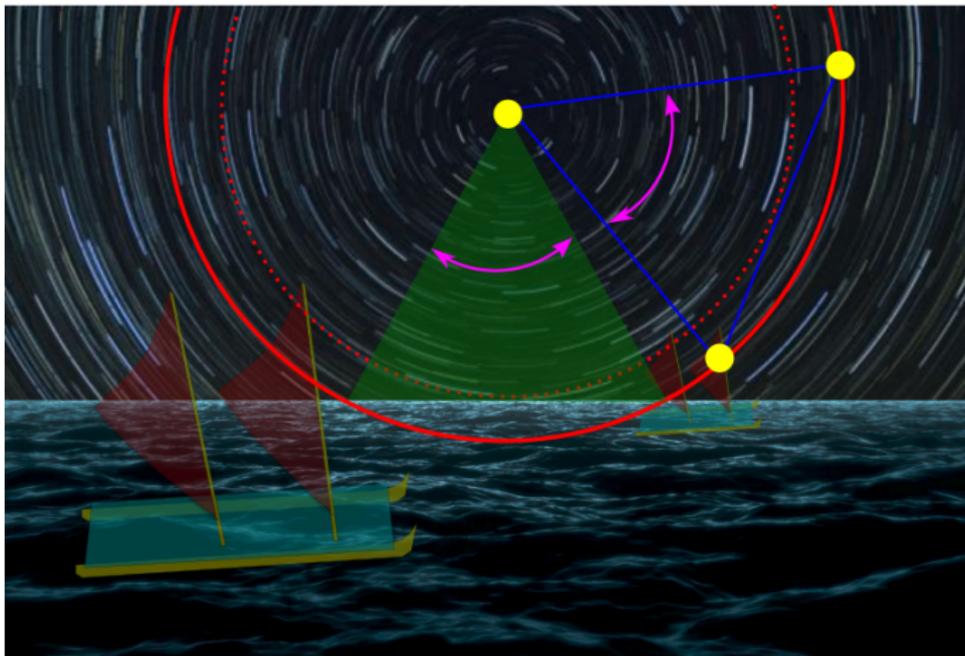

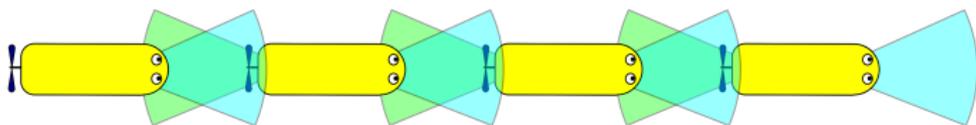

Ancestral method of navigation

Polynesian navigation

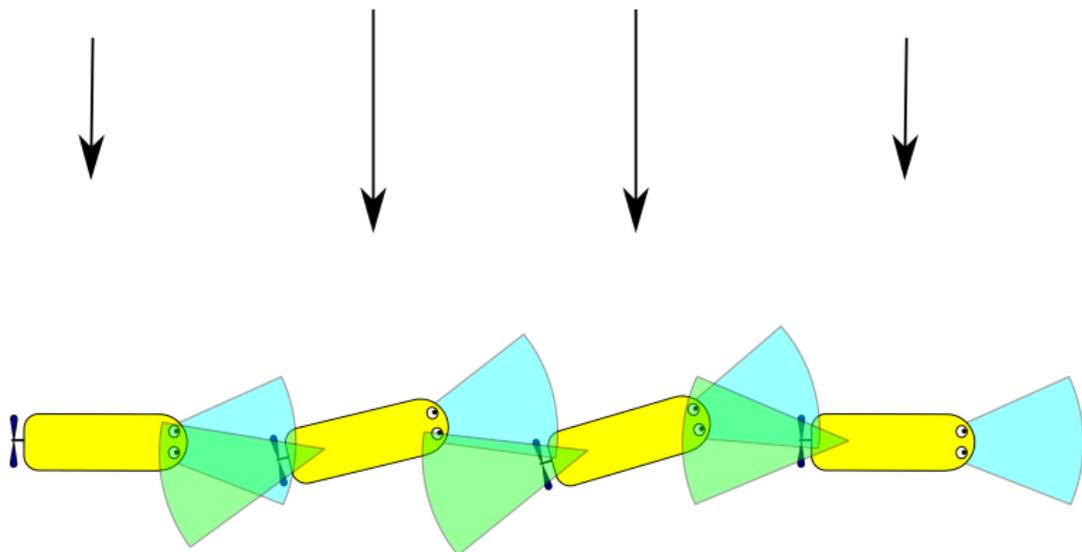

Find the route without GPS, compass and clocks with *wa'a kaulua*[?]

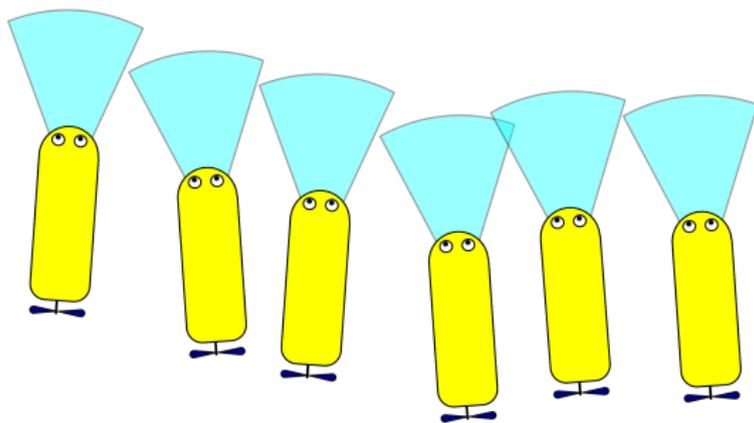

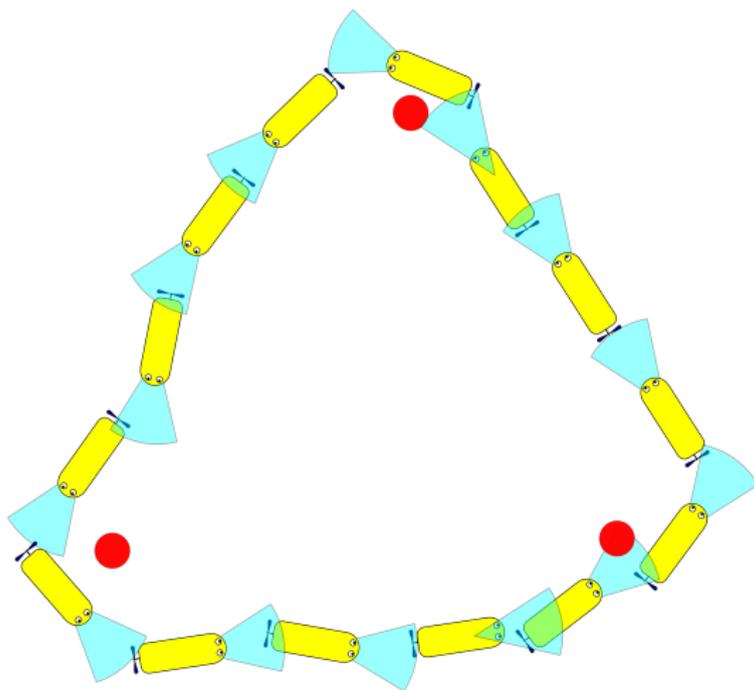

More inertia, more predictable

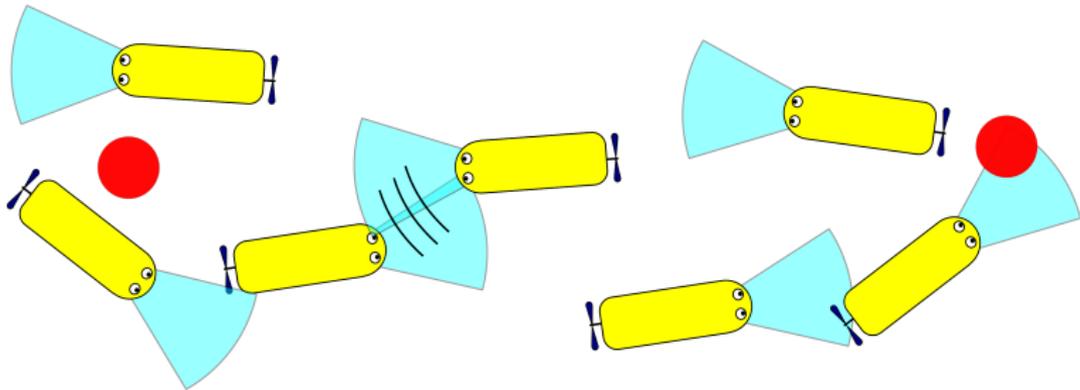

Internal deformations provide information

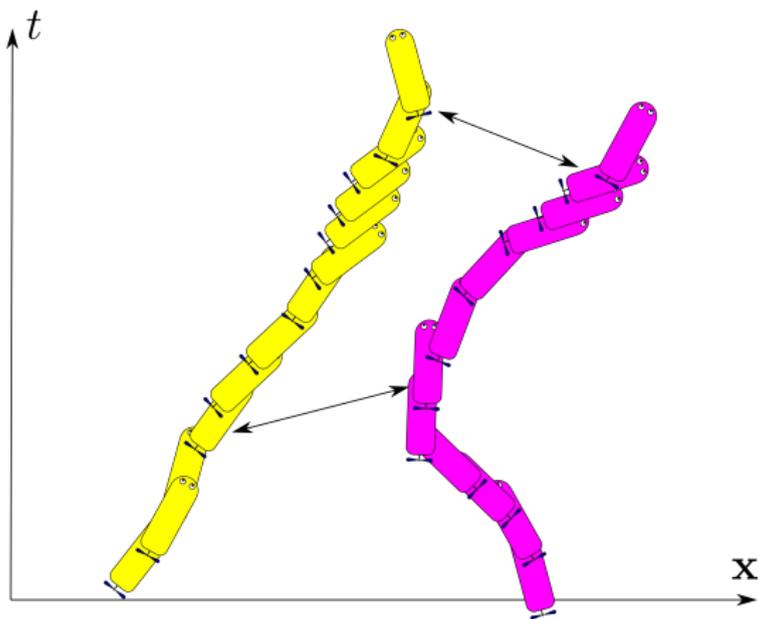

Explore further

Virtual chain: localization \leftrightarrow proprioception

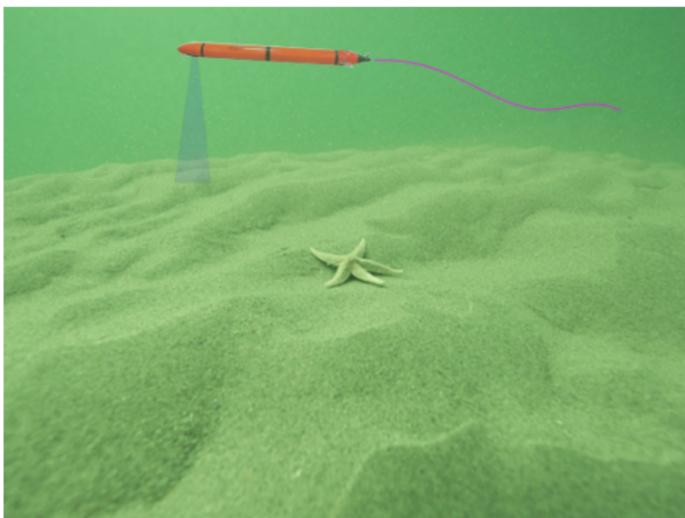

With communication we can do more

Perception of others rigidifies the evolution of the group

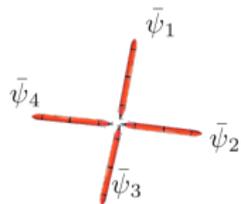

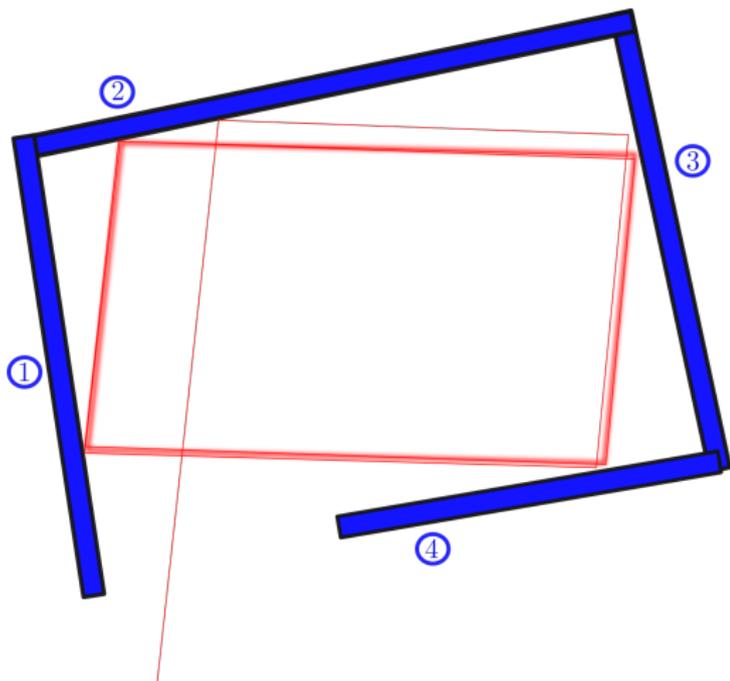

Stable cycles

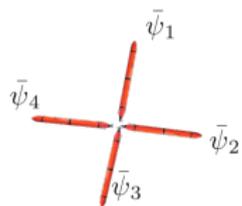

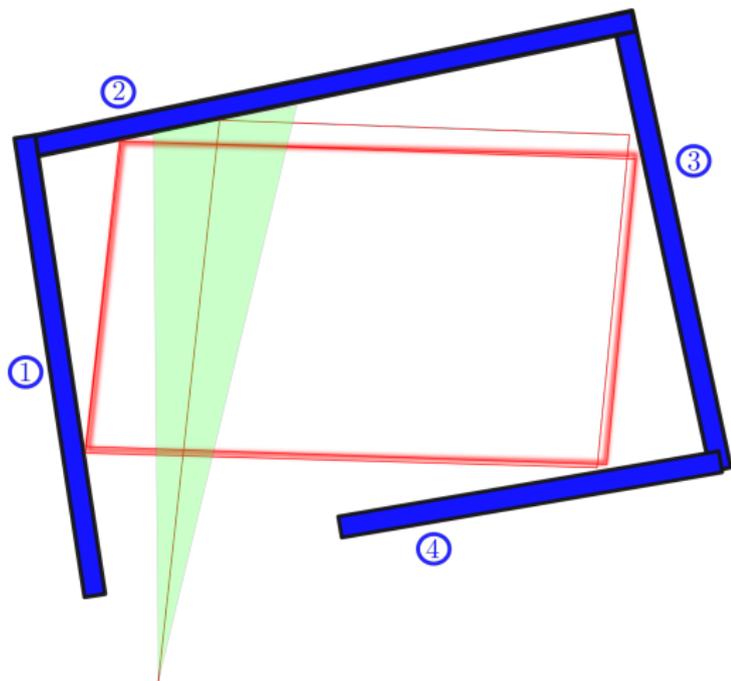

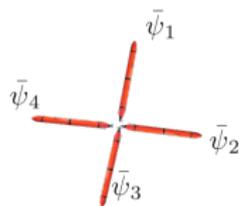

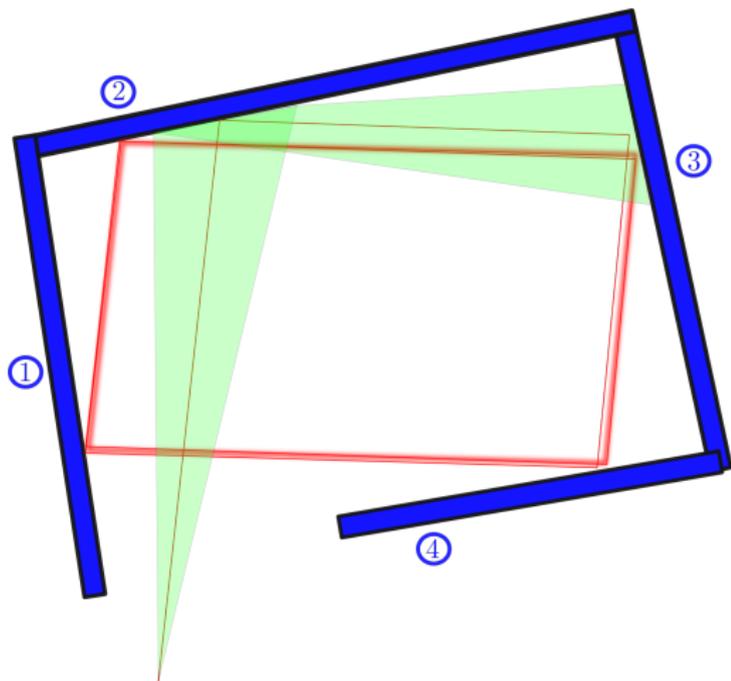

No route exist

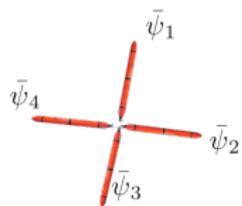

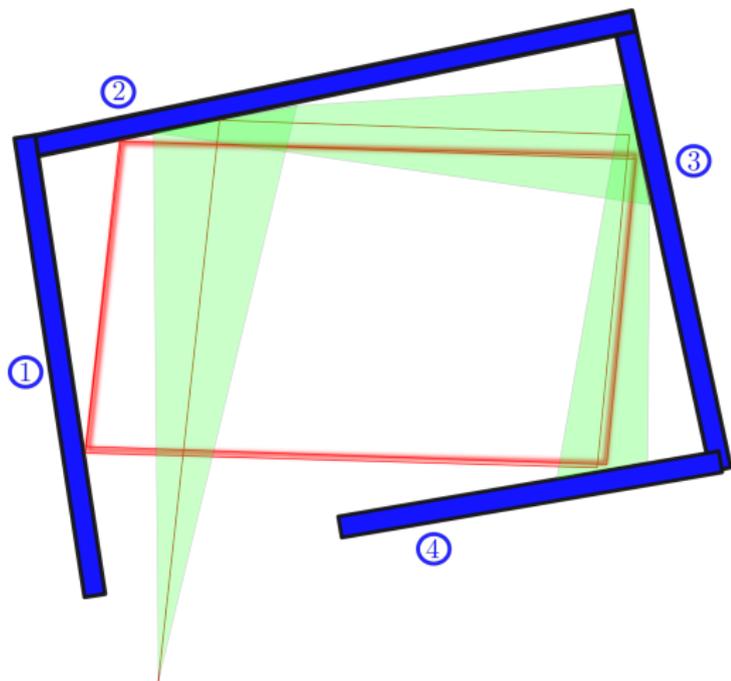

A cycle is stable if

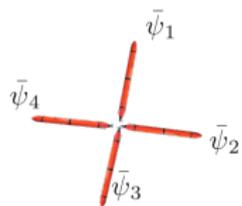

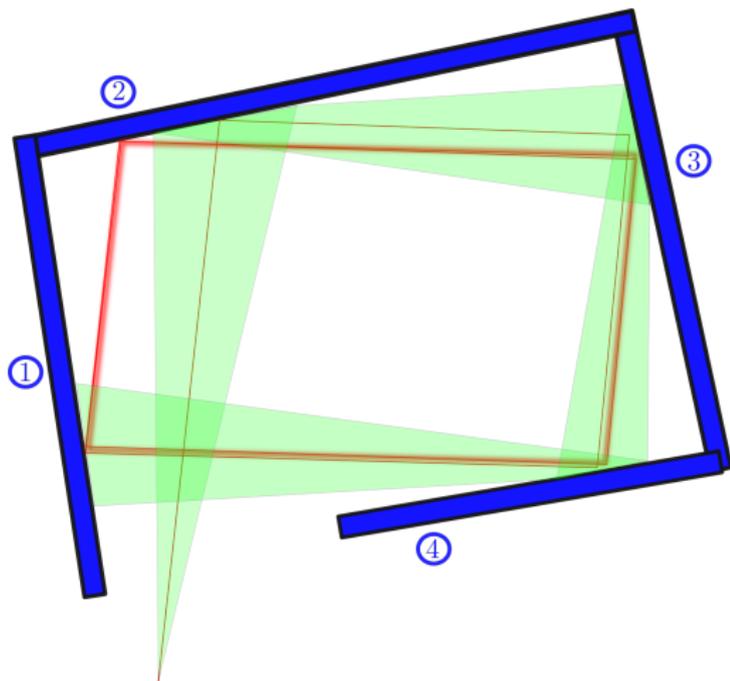

$$\prod_i \frac{\sin \beta_i}{\sin \alpha_i} < 1$$

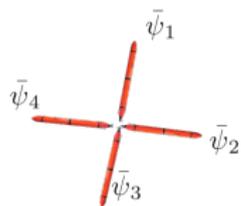

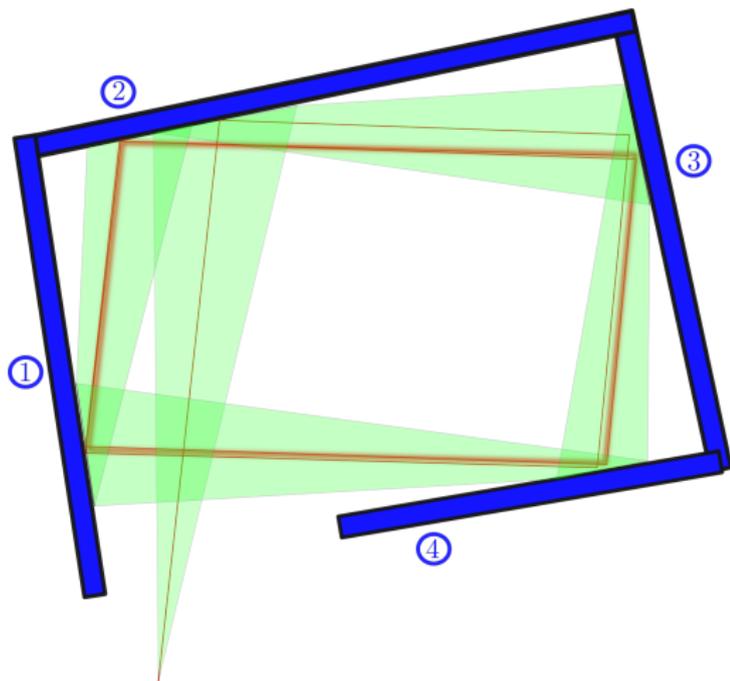

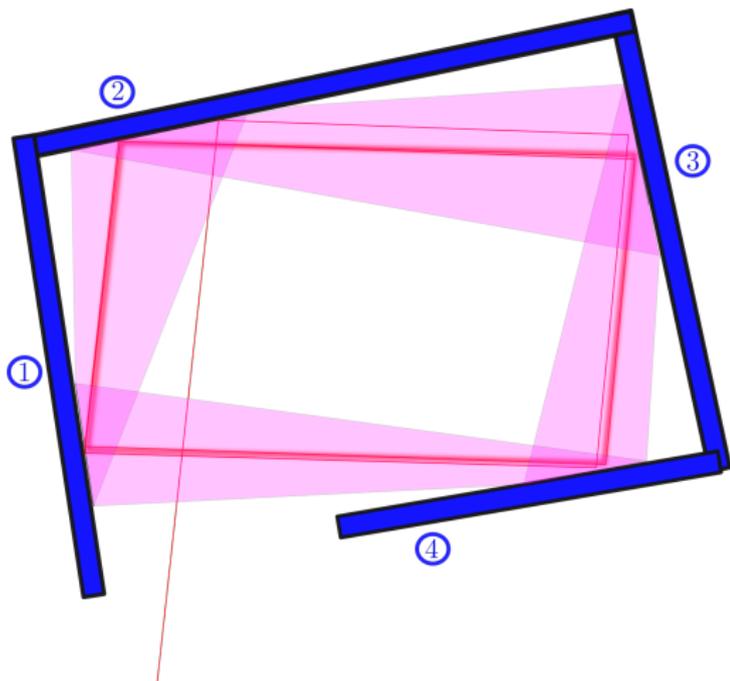

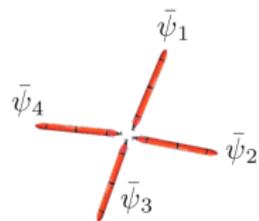

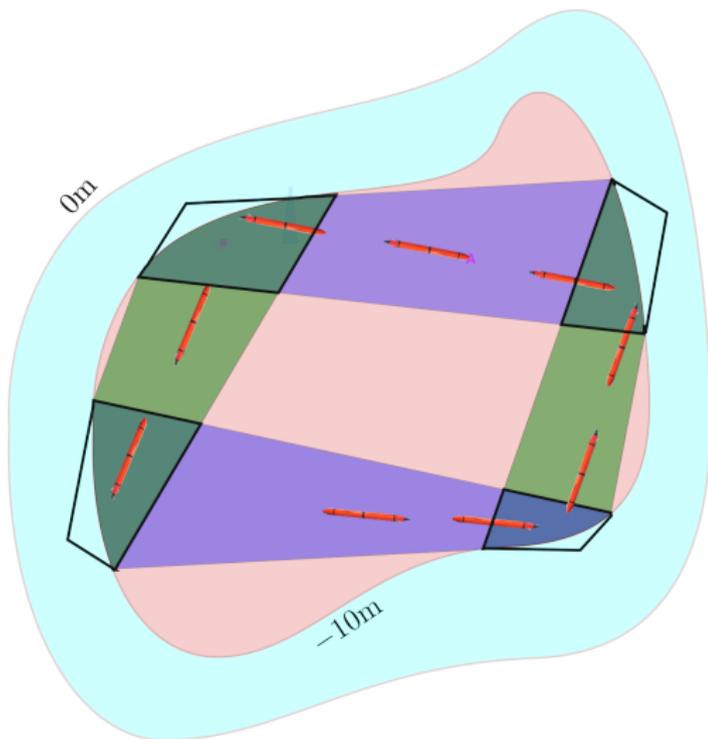

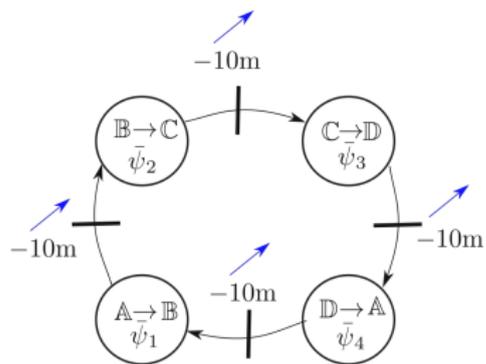

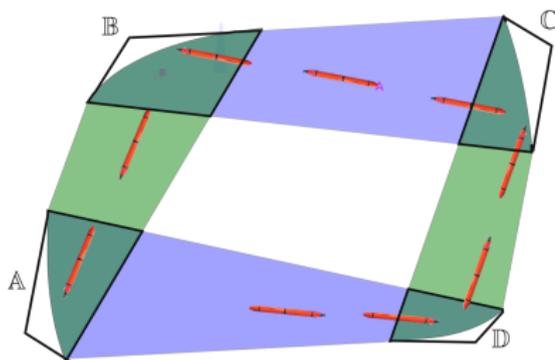

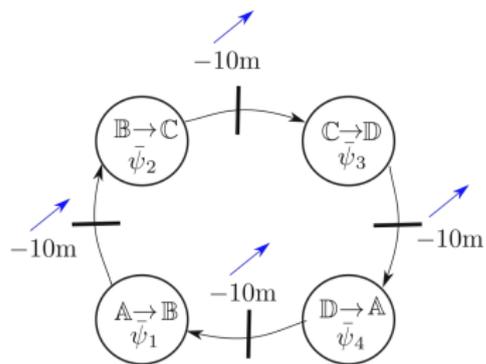

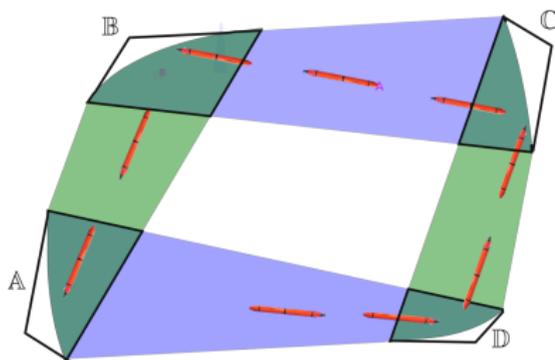

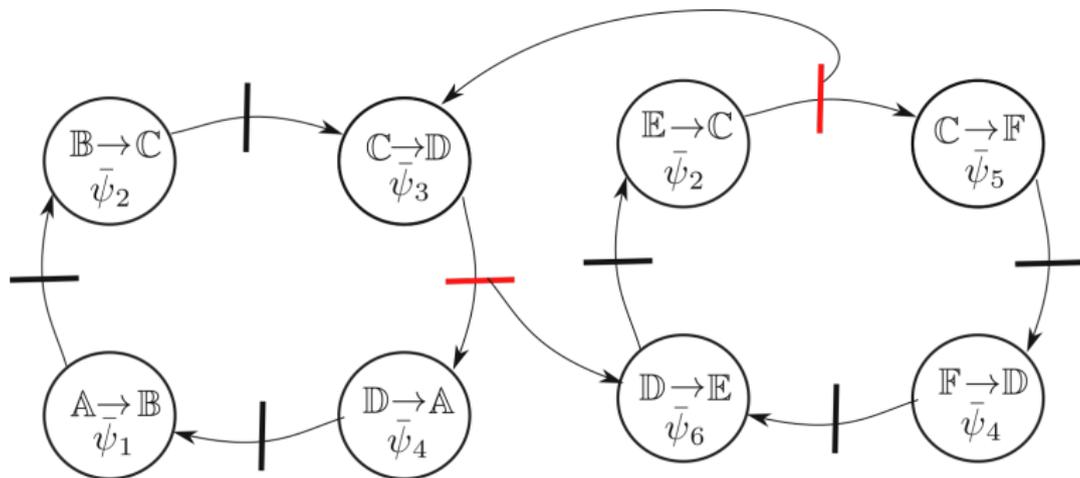

<https://youtu.be/TsvEUGa-XAs?t=73>

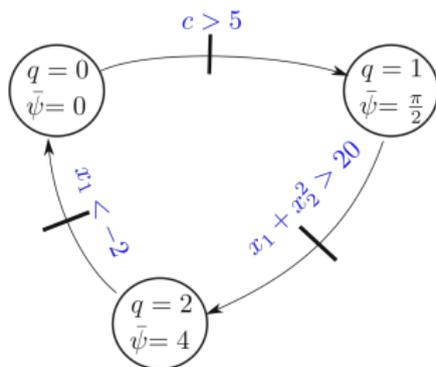

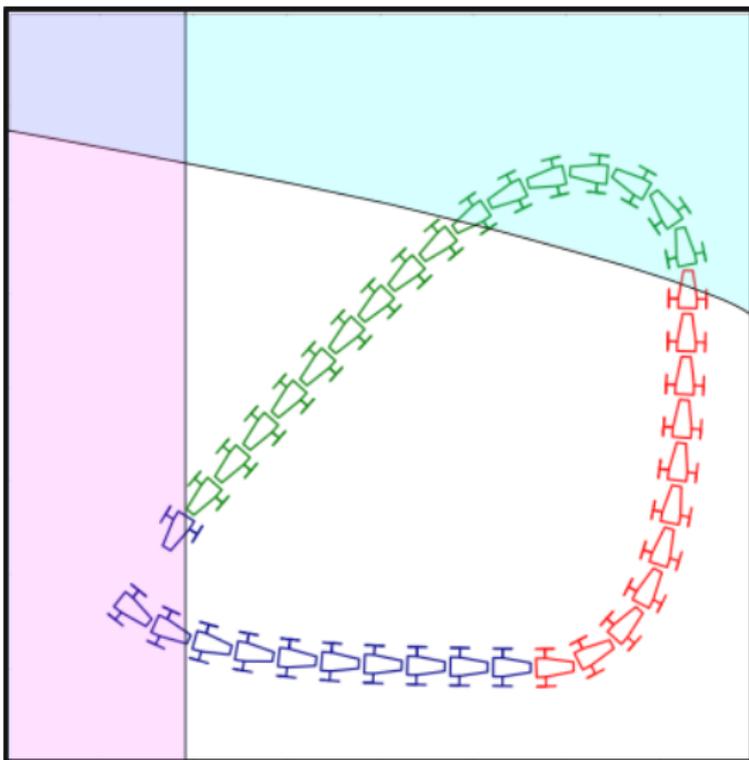

Test-case

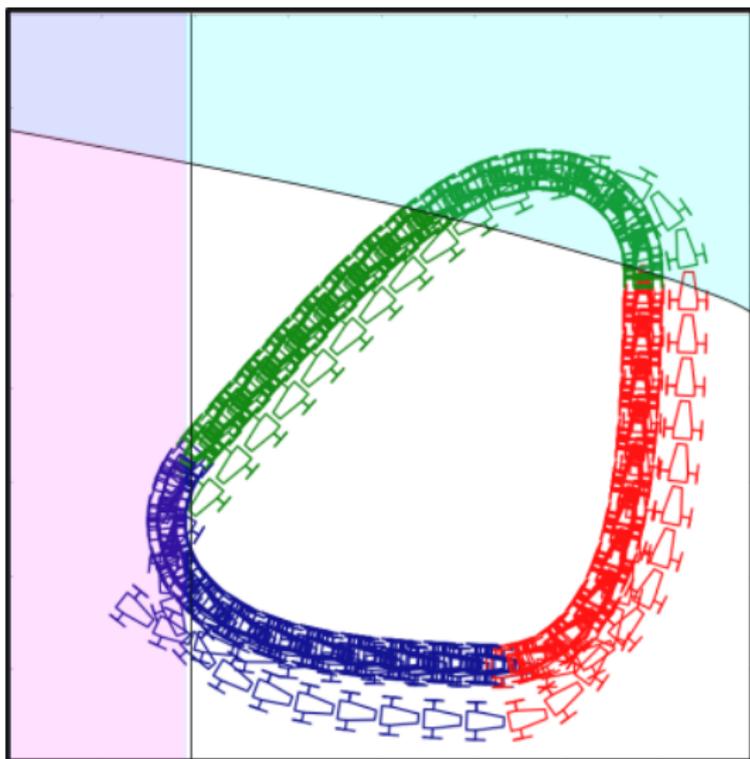

Consider the robot

$$\begin{cases} \dot{x}_1 = \cos x_3 \\ \dot{x}_2 = \sin x_3 \\ \dot{x}_3 = u \end{cases}$$

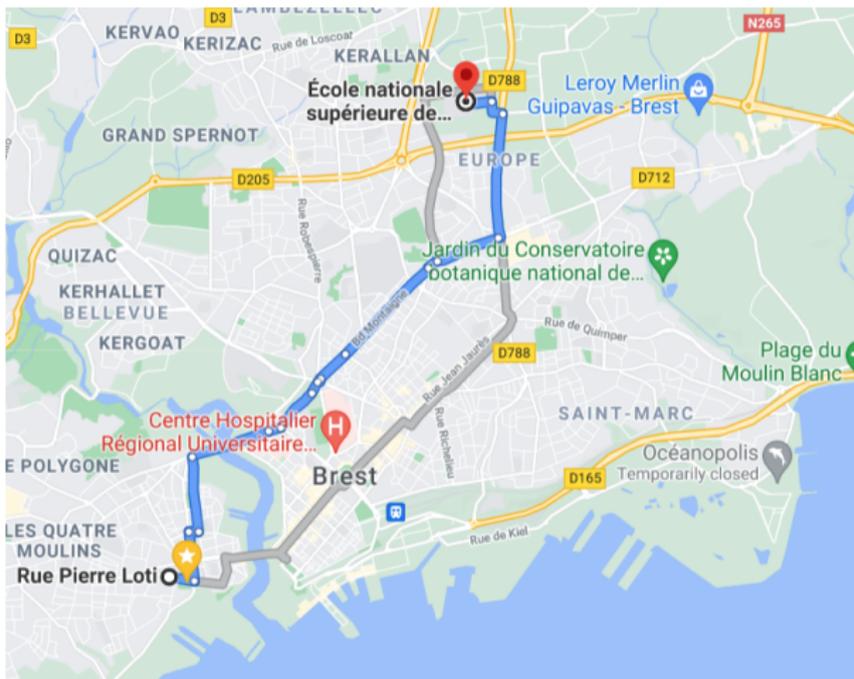

with the heading control $u = \sin(\bar{\psi} - x_3)$.

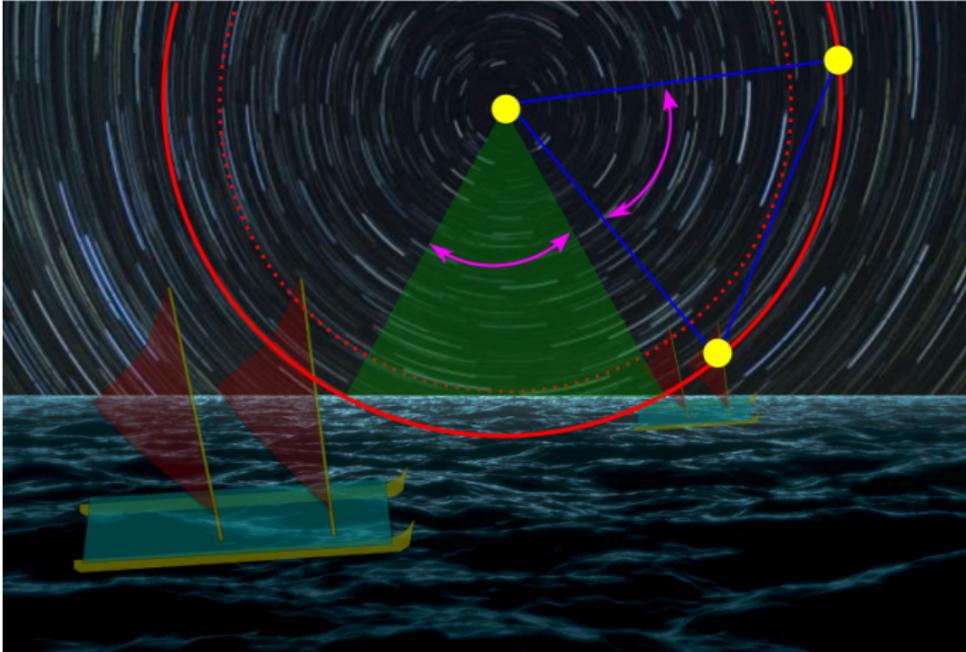

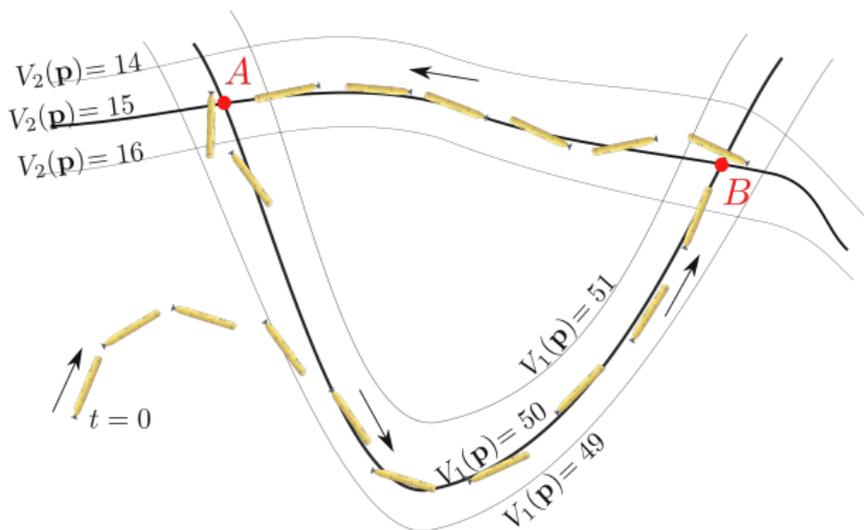

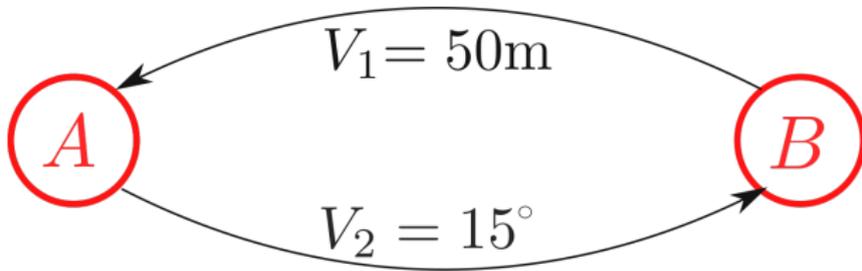

Metric maps ? Topological
maps ? Other ?
