**Objective**: Perform a localization in an unknown environment without building a map.

A B A A B A

## Loop detection problem

▶ < ∃ ▶</p> Construction of a Mosaic from an Underwater Video with g

< 一型

**Example**. We are driving a car in the desert. We measure the speed of the car and its orientation. We have no GPS, no camera. **Problem**. Count the number of loops we made.

→ 3 → < 3</p>

### Loop detection problem

Brouwer fixed point theorem Interval analysis Test-case

**Robot**: We consider a state equation

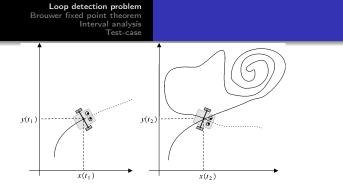

$$\left\{ \begin{array}{rll} \dot{x} &=& f(x,u) \\ y &=& g(x) \end{array} \right.$$

- u: proprioceptive sensors
- y: exteroceptive sensors

**Problem**: detect loops with proprioceptive (reliable) and exteroceptive (unreliable) sensors.

# t-plane

Construction of a Mosaic from an Underwater Video with g

Define the shift function

$$\mathbf{f}(t_1,t_2)=\int_{t_1}^{t_2}\mathbf{v}(\tau)\,d\tau$$

The loop set is

$$\mathbb{T} = \left\{ (t_1, t_2) \in [0, t_{\max}]^2 \mid \mathbf{f}(t_1, t_2) = \mathbf{0}, t_2 > t_1 \right\}$$

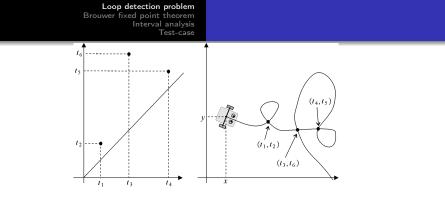

< ∃ →

### Loop detection problem

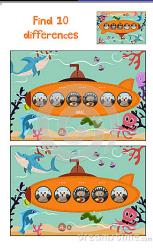

Brouwer fixed point theorem Interval analysis Test-case

Are you sure we made a loop ?

・ロン ・御と ・道と ・ 道と Construction of a Mosaic from an Underwater Video with g

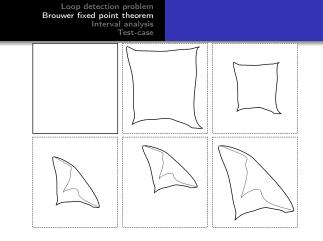

Construction of a Mosaic from an Underwater Video with g

Brouwer fixed point theorem

Construction of a Mosaic from an Underwater Video with g

< ∃ →

Brouwer fixed point theorem (1909). Any continuous function n from bounded convex subset of  $\mathbb{R}^n$  to itself has a fixed point; i.e., a point such that  $\mathbf{n}(\mathbf{x}) = \mathbf{x}$ .

Distortion; narrowing; folding; shifting; enlargement : at least one point has not moved

Example. If

$$\mathbf{n}(t_1, t_2) = \left(\begin{array}{c} \cos\left(t_1 - t_2^2\right) \\ \sin\left(t_1 t_2\right) \end{array}\right)$$

Since

$$\textbf{n}\left([-1,1],[-1,1]\right) \subset [-1,1] \times [-1,1]$$

we conclude

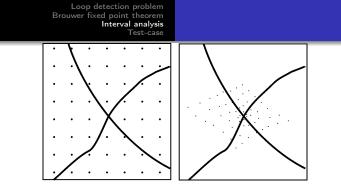

$$\exists (t_1, t_2) \in [-1, 1]^2 \mid \mathbf{n}(t_1, t_2) = (t_1, t_2).$$

If we have a function  $\boldsymbol{n}$  such that

$$\mathsf{n}(\mathsf{x}) = \mathsf{x} \Rightarrow \mathsf{f}(\mathsf{x}) = \mathbf{0},$$

then using Brouwer theorem we can detect loops.

## Interval analysis

Construction of a Mosaic from an Underwater Video with g

(日) (同) (三) (

æ

-

### **Problem**. Given $f : \mathbb{R}^n \to \mathbb{R}$ and a box $[\mathbf{x}] \subset \mathbb{R}^n$ , prove that

 $\forall \mathbf{x} \in [\mathbf{x}], f(\mathbf{x}) \geq 0.$ 

Construction of a Mosaic from an Underwater Video with g

▲ □ ▶ ▲ □ ▶ ▲ □ ▶

Example. Is the function

$$f(\mathbf{x}) = x_1 x_2 - (x_1 + x_2) \cos x_2 + \sin x_1 \cdot \sin x_2 + 2$$

always positive for  $x_1, x_2 \in [-1, 1]$  ?

< ∃ >

э

### Interval arithmetic

$$\begin{array}{ll} [-1,3] + [2,5] &= [1,8] \\ [-1,3] \cdot [2,5] &= [-5,15] \\ \sin \left( [0,2] \right) &= [0,1] \end{array}$$

Construction of a Mosaic from an Underwater Video with g

The interval extension of

$$f(x_1, x_2) = x_1 \cdot x_2 - (x_1 + x_2) \cdot \cos x_2 + \sin x_1 \cdot \sin x_2 + 2$$

is

$$[f]([x_1], [x_2]) = [x_1] \cdot [x_2] - ([x_1] + [x_2]) \cdot \cos[x_2] + \sin[x_1] \cdot \sin[x_2] + 2.$$

Construction of a Mosaic from an Underwater Video with g

Theorem (Moore, 1970)

# $[f]([\mathbf{x}]) \subset \mathbb{R}^+ \Rightarrow \forall \mathbf{x} \in [\mathbf{x}], f(\mathbf{x}) \ge 0$

# Bracketting sets

Construction of a Mosaic from an Underwater Video with g

æ

-

Subsets  $\mathbb{X} \subset \mathbb{R}^n$  can be bracketed by subpavings :

 $\mathbb{X}^{-}\subset\mathbb{X}\subset\mathbb{X}^{+}.$ 

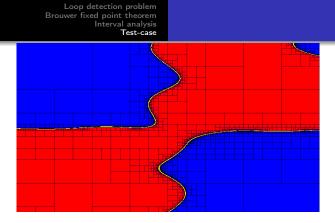

which can be obtained using interval calculus

★ Ξ →

### Example.

$$\mathbb{X} = \{ \mathbf{x} \mid x_1 x_2 - (x_1 + x_2) \cos x_2 + \sin x_1 \cdot \sin x_2 + 2 \ge 0 \}.$$

Construction of a Mosaic from an Underwater Video with g

 Construction of a Mosaic from an Underwater Video with

▲口> ▲圖> ▲屋> ▲屋> Construction of a Mosaic from an Underwater Video with g

## Loop set defined as inequalities

< ☐ ▷ < ☐ ▷ < ≧ ▷ < ≧ ▷ < ≧ ▷ < ≧ ○ < २</li>
 Construction of a Mosaic from an Underwater Video with

#### The robot knows a box $[\mathbf{v}](t)$ for $\mathbf{v}(t)$ . We have

$$\mathbb{T} = \left\{ (t_1, t_2) \in [0, t_{\mathsf{max}}]^2 \mid \exists \mathsf{v} \in [\mathsf{v}] \text{,} \int_{t_1}^{t_2} \mathsf{v}( au) d au = \mathbf{0}, t_1 < t_2 
ight\}$$

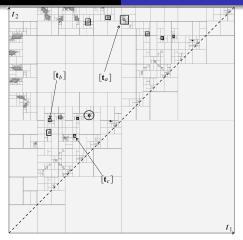

▲ □ ▶ ▲ 三 ▶ ▲ Construction of a Mosaic from an Underwater Video with a

-

Thus  ${\mathbb T}$  is defined by

$$\mathbf{h}(t_1,t_2) = \begin{pmatrix} \int_{t_1}^{t_2} \mathbf{v}^-(\tau) d\tau \\ -\int_{t_1}^{t_2} \mathbf{v}^+(\tau) d\tau \\ t_1 - t_2 \end{pmatrix} < \mathbf{0}.$$
