Ocean satellites

Ocean satellites ?

Robots are needed for dirty, dangerous and dull jobs

Curiosity

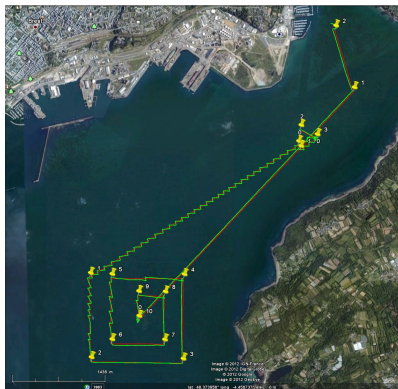

About 3,600 satellites in orbit.

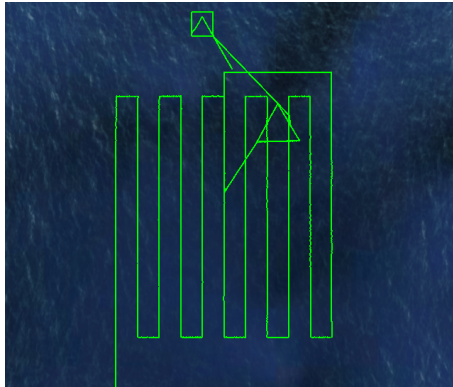

In the ocean, we have gliders, drifting buoys.

In the ocean, a robot could be autonomous in energy, and could survive for years (**persistent autonomy**).

Vaimos

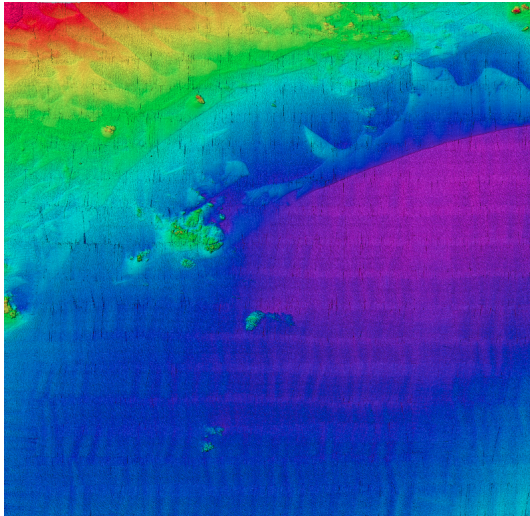

Middle of Atlantique ocean, 350 km made by Vaimos, sept. 6-9, 2012.
