How to use OpenCV 1.1pre1a with Borland C++ Builder 5

You cannot use the *.lib files provided in OpenCV/lib folder. You must recreate it with IMPLIB, a tool provided with C++ Builder. In a command prompt, go to %ProgramFiles%\Opencv\bin and type :
implib -a cv_bcb5.lib cv110.dll

Do the same for cxcore, cvaux, highgui,...

Than, like for other compilers, add the generated .lib you need to your project, as well as the needed include directories (c:\Program Files\Opencv\cv\include, c:\Program Files\Opencv\cvaux\include,...)
