

# How to select an area bigger than the screen in an image with MS Paint

## 1<sup>st</sup> method

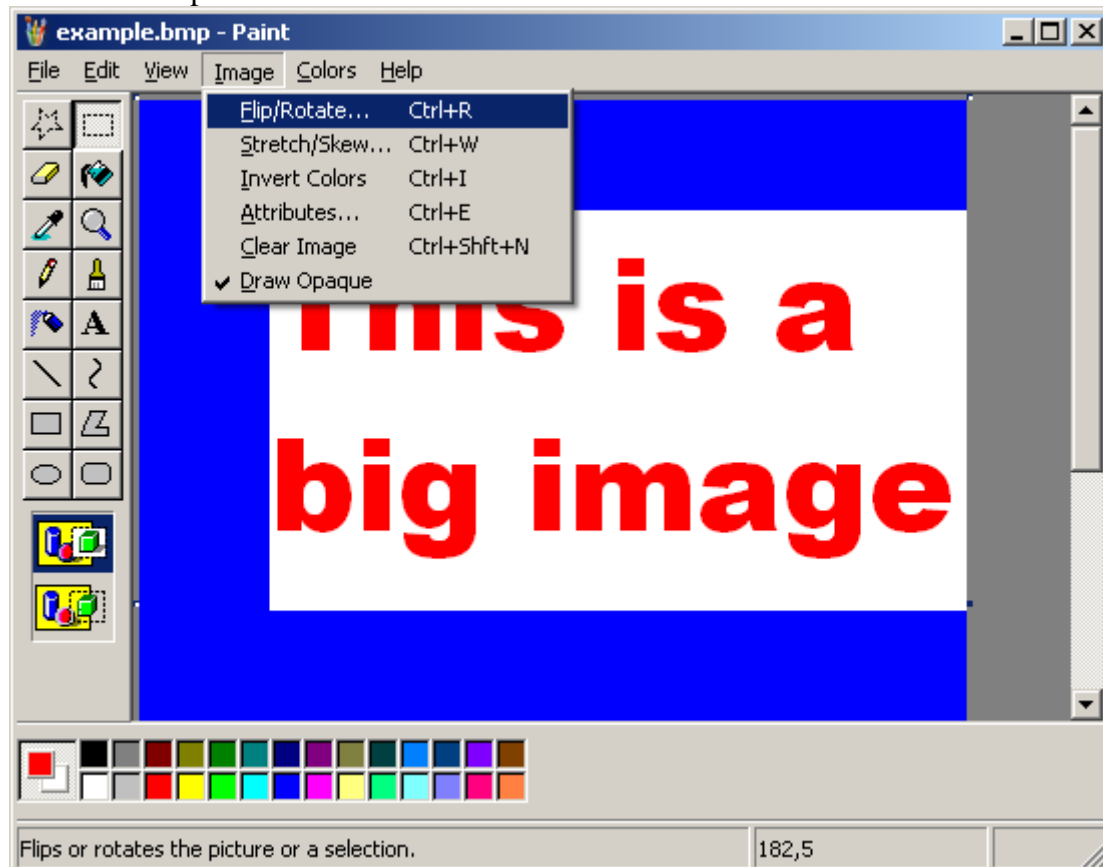

First you can easily temporarily reduce the bottom part of the image

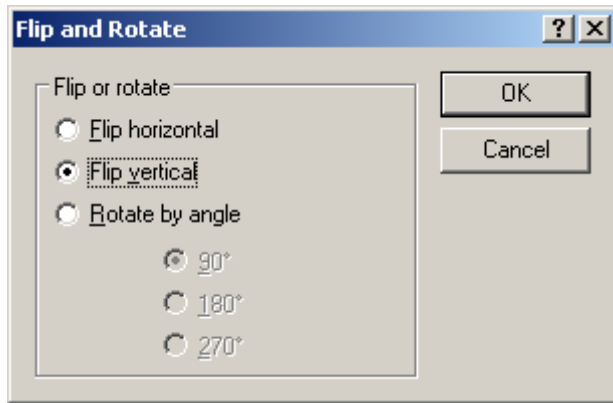

Same with the right border

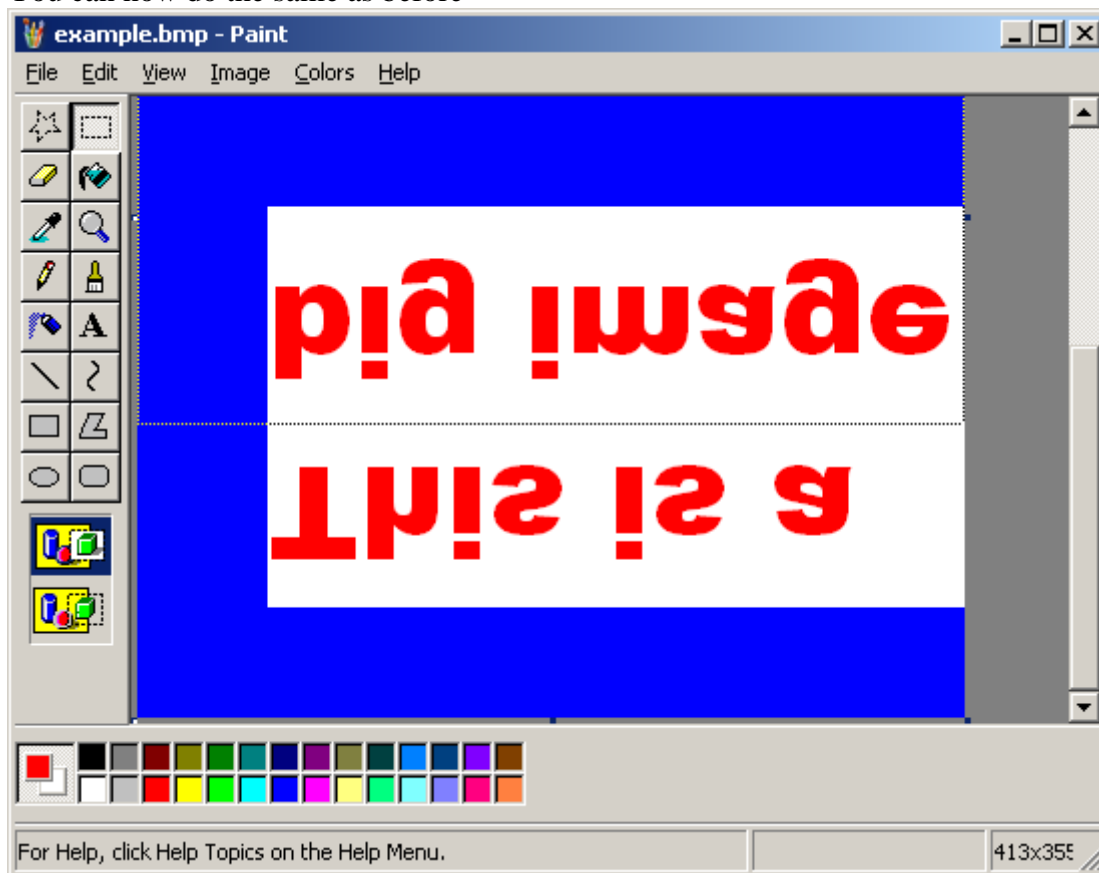

The problem is that you cannot directly do the same with the left and upper corners. The trick is to use the flip functions of Paint...

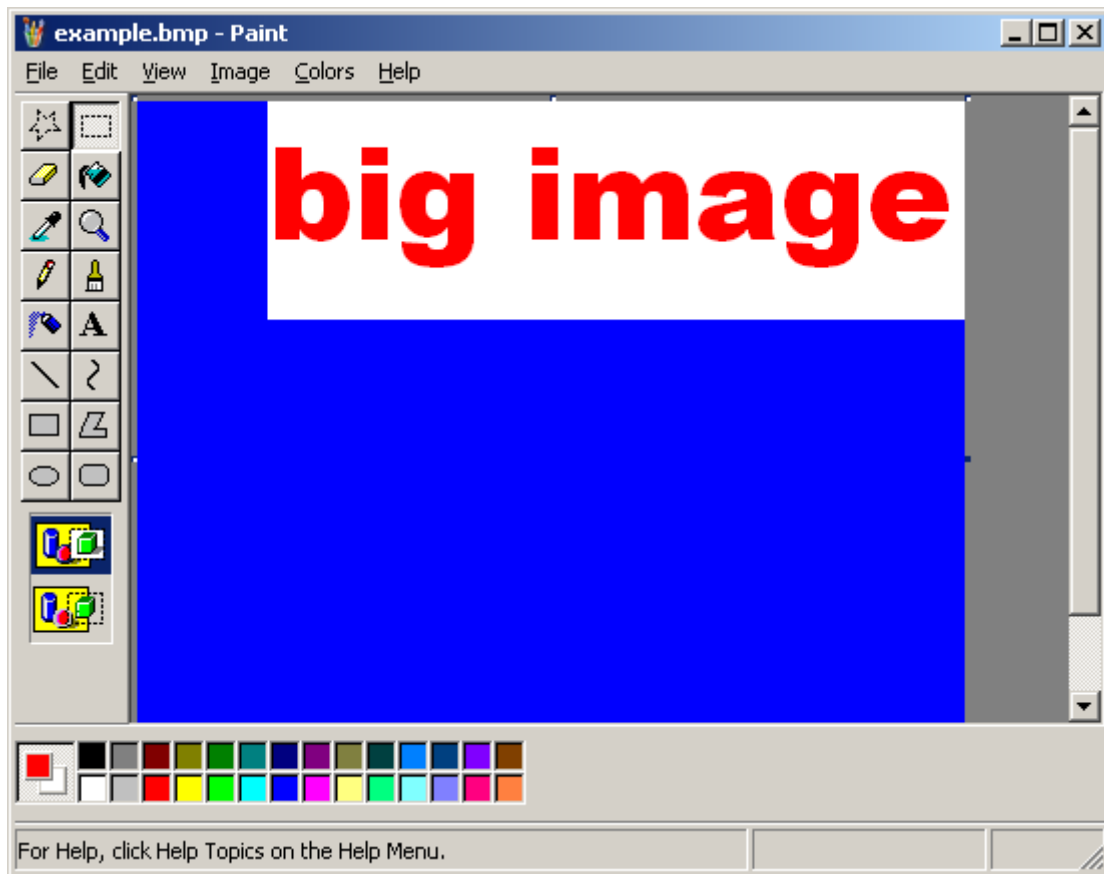

You can now do the same as before

When done you flip again and use the select all function with the result

**2<sup>nd</sup> method (from Jan SLIWKA)**

You select the entire image with CTRL+A and then left-click on it and move the mouse to move the image to the up and left until where you want to delete the unneeded upper and left borders parts.
