

# TRAINING PROGRAM

2019 > 2022

The first two semesters are common to all students, whereas the following semesters are different according to the options you choose to further your studies (9 possible choices).

# YEAR 1 (BAC+3)

Last Carton		
SEPTEMBER TO DECEMBER	JANUARY	JANUARY
SEMESTER 1	INTERNSHIP (4 WEEKS)	SEMESTER 2

# YEAR 2 (BAC+4)

SEPTEMBER TO DECEMBER	DECEMBER TO APRIL	FROM MAY	FROM JUNE
SEMESTER 3	SHORT SEMESTER 4*	INTERNSHIP (4 À 5 MONTHS)	
SEMESTER 3	OR LONG SEMESTRE 4* INTERNSHIP (3 à 4 m		INTERNSHIP (3 à 4 months)

# YEAR 3 (BAC+5)

LAIT O (BAC13)		
SEPTEMBER TO FEBRUARY	FROM MARCH	
SEMESTER 5	SEMESTER 6 = END OF STUDIES INTERNSHIP (5 to 6 months)	

<sup>\*</sup>The students can choose from 2 different options for Semester 4. If hethey wants to validate histheir international "quitus" during histheir 2nd year internship, hethey can finish histheir semester earlier. The Course Units (CUs) specific to a long Semester 4 are followed by an asterisk in the following tables.

# **CORE CURRICULUM**

Course Units = Unités d'Enseignement (UE)

Mathematics for Engineers	Probability and Statistics
Introduction to Programming	Informatics
Introduction to MATLAB	Partial Differential Equations and Wave Propagation
Analysis of Spatial Data	Signal Processing 2 🗱
Signal Processing 1	Data Bases
Continuum Mechanics	Incompressible Fluid Mechanics 🟶
CU SCIENCES AND TECHNOLOGIES (10 ECTS)	CU SCIENCES AND TECHNOLOGIES (8 ECTS)
Technological Analysis	Manufacturing Processes #
Technological Analysis	Manufacturing Processes
Technological Analysis Computer Aided Design	Manufacturing Processes # Materials
Technological Analysis Computer Aided Design Introduction to Systems Engineering	Manufacturing Processes    Materials  Mechanics of Deformable Bodies
Technological Analysis  Computer Aided Design  Introduction to Systems Engineering  Mechanics of Rigid Bodies	Manufacturing Processes   Materials  Mechanics of Deformable Bodies  Experimental Mechanics
Technological Analysis  Computer Aided Design Introduction to Systems Engineering Mechanics of Rigid Bodies Sensors	Manufacturing Processes   Materials  Mechanics of Deformable Bodies  Experimental Mechanics  Interfaces between Digital and Analog

Semester 1 (10 ECTS)		Semester 3 (5 ECTS)	Semester 4	Semester 5
	CU HUMAN AND SOC	IAL SCIENCES, SPORT AND	LANGUAGE LEARNING	
LL 1 English	LL 1 English	LL 1 English	LL 1 English	Choice of LL1/LL2
LL2 optional	LL2 optional	LL2 optional	LL2 optional	Sport
Sport	Sport	Sport	Sport	Choice of Cultural Awareness Workshops
The Engineer and Society 1	The Engineer and Society 2	Financial Management	Company Activity	Leadership
Internship Preparation	Big Challenge		Optional Modules 🛟	
Personal Development 1	Personal Development and Society 2			
	Marketing and Human Resources			

/ SI LUIALIZATION		
<b>HYDROGRAPHY-OCE</b>	ANOGRAPHY	
Semester 3	Semester 4	Semester 5
CU CORE SUBJECTS FOR HYDROGRAPHY (9 ECTS)	CU GEOMATICS (3,5 ECTS)	CU CARTOGRAPHY AND UNDERWATER NAVIGATION
Applied Mathematics	Kalman Filter	Cartography
Linear Optimization	Geographic Data Management	Law of the Sea
<ul> <li>Estimation</li> <li>Introduction to Hydrography</li> <li>Bathymetry</li> </ul>	Spatial Interpolation	Underwater Navigation
CU GEOSCIENCES (7,5 ECTS)	CU OCEANOGRAPHY AND MARINE	CU REMOTE SENSING AND MODELING
	GEOPHYSICS (5 ECTS)	
<ul><li>Geology</li><li>Tides</li><li>Geodesy</li></ul>	<ul> <li>Descriptive Physical Oceanography</li> <li>Marine Geophysics</li> </ul>	Remote Sensing     Coastal Ocean Modeling
Positioning Technology	Geophysical Fluid Dynamics     Sub-Bottom Profilers	, and the second
	CU HYDROGRAPHIC DATA PROCESSING AND ANALYSIS (3,5 ECTS)	CU PROFILE
	Bathymetric Data Processing	Specific lessons according to profile
	Introduction to Geostatistics     Hydrographic Project Management	Hydrodynamics     ADCP : Acoustic Doppler Current Profiler
× anathyatian avat	THE AND ADDICIONAL INSTELL	LOTING
	EMS AND ARTIFICIAL INTELI	
Semester 3	Semester 4	Semester 5
CU CORE SUBJECTS (7 ECTS)	CU OBSERVATION SYSTEMS (6 ECTS)	CU ARTIFICIAL INTELLIGENCE

Mechanical Engineering     Power Transmission Systems 1     Thermics/Thermodynamics/Themomechanics	Introduction to Advanced Modeling of Materials and Structures     Optimization	Explicit Dynamics     Stability and Finite strain theory
	CU SPECIFIC TO LONG SEMESTER*	CU MODELING OF MATERIALS AND STRUCTURES

# **M** ENGINEERING AND BUSINESS SCIENCE

Semester 3 Semester 4 Semester

These in-depth studies take place in Semester 5. They are proposed in addition to the courses given in Semesters 3 and 4 and in one of the 8 other in-depth study paths.

other in-depth study paths.	
	CU LEGAL, POLITICAL AND ECONOMIC ENVIRONMENTS
	<ul> <li>Economics (international, defense, industrial)</li> <li>Law (European and institutional, intellectual property, contract law)</li> <li>Strategic Monitoring</li> <li>Social Responsibility of Businesses</li> </ul>
	CU PROJECT MANAGEMENT, INNOVATION MANAGEMENT AND BUSINESS ENGINEERING
	<ul> <li>Project Management (abroad, supply chain)</li> <li>Management Information Systems</li> <li>Production Management (lean management, quality management, team leadership, management of intangible assets</li> <li>Serious Game on Business Engineering</li> </ul>
	CU ENVIRONMENT AND COMPETITION
	<ul> <li>Marketing: Ccommercial Ddevelopment, Ccrisis Ccommunication</li> <li>Economic Intelligence</li> <li>International Negotiation Tools</li> <li>Technology Transfers</li> </ul>

# → THE PROJECTS

## SEMESTER 1/Bibliography

The bibliographic study is approached as a research exercise: reading then synthesis of the technical and scientific documents

The objectives are to learn how to gather information, work in a team, successfully complete work within pre-fixed deadlines and write a formatted bibliographic synthesis. The students show proof of initiative, curiosity and autonomy.

## SEMESTER 2/ Systems Discovery and Analysis

Semester 2 is composed of 3 projects enabling the first courses to be put into practice.

These 3 projects (the "Informatics" Project, the "Big Challenge" Project and the "Systems Discovery" Project) enable the students to develop their abilities to problematize, comprehend complexity in various fields as well as put their knowledge into practice to answer the issues raised.

# SEMESTER 3/ Field Application Project

This Course Unit is composed of project leadership (leading a project...) and project management (multi-cultural aspects, diversity...), systems engineering courses and a scientific and technical pre-project linked to the chosen training profile.

It comprises the 3rd step in the series of projects which aims to increase autonomy and the active acquisition of knowledge throughout the training.

# **SEMESTER 4/ The Enhanced Focus Project**

This enables future engineers to deal with an industrial issue proposed by a business in the field of mechanics, information technologies, or hydrography. Grouped into small teams (2 to 5 students), the future engineers are required to apply a project management approach to satisfy the industrial objectives defined by the project initiator.

This major project enables the students to apply their scientific and technological knowledge, make contacts, establish the scope of the subject and the important technical choices to respect the deadlines. In some cases, their work concludes with the design of a demonstrator. A second project is proposed to students who opt for the long semester with a choice of either an introduction to research or entrepreneurship.

# **SEMESTER 5/ Enhanced Focus Systems Project**

This enables students to work on concrete subjects comparable with those that they will meetcarry out in their future career.

In order to confront this real industrial issue, in relation with their in-depth study path, the student engineers are called upon to review and apply their knowledge as well as demonstrate their initiative. This is not an academic exercise with a single solution. Within their teams, the students have to envisage different scenarios and choose the answer that seems to them to be the most suitable for the objectives and constraints imposed, in the time allowed.
